

# DALILA ACQUAVIVA

Java Developer

**Dear Company,**

Over the course of my studies and professional experiences, I have developed a growing passion for information technology, particularly in the development of web applications and software solutions that simplify the daily activities of individuals and businesses.

I consider myself a responsible, determined, and collaborative person. I enjoy working both in teams—sharing common goals—and independently, managing assigned tasks with organization and precision.

Throughout my professional journey, I have built both soft and technical skills: from effective communication and problem-solving acquired in the accounting field, to the design and development of backend applications using Java, Spring Boot, Spring Cloud, and Kafka, as well as the management of relational and NoSQL databases (MySQL, PostgreSQL, MongoDB). I have experience with microservices architecture, tools such as Docker, Kubernetes, and Git, and Agile methodologies (JIRA).

Among the most significant projects, I contributed to the development of the web application for the Household Appliance Bonus, creating APIs for managing public initiatives and integrating with the IO app of the Italian Public Administration. Additionally, I developed a management platform using Spring Boot, overseeing the entire backend architecture—from technical analysis to implementation and RESTful API documentation.

I am highly motivated to take on new challenges in a dynamic and innovative environment, where I can continue to grow and actively contribute to the development of effective and impactful technological solutions.

If you are interested in viewing some of my work, I invite you to visit my personal website, developed with React, where I showcase a selection of the projects I've worked on so far:

I hope to have the opportunity to meet in person and I look forward to hearing from you.

Best regards,

*Dalila Acquaviva*
